

Find out more about Epigastric Hernia Surgery

If you are considering Epigastric Hernia Surgery we would like you to be as well informed as possible.

What are the alarming symptoms?

- Increasing in size
- Worsening pain
- If the hernia turns hard and associated with nausea or vomiting, could indicate obstructed hernia

What is a strangulated hernia?

Strangulated hernia is a surgical emergency, if neglected can lead to very serious complications. Strangulation occurs when blood supply to hernia contents, usually bowel, is impaired leading to ischemia (death of the bowel) or gangrene of the bowel.

What is the treatment of epigastric hernia?

Generally, symptomatic epigastric herniae are repaired by surgery. Conservative approach can be used in unfit patients.

When is the surgery required?

When hernia becomes painful, increase in size or causes any other symptoms.

What are the different types of surgery available?

Epigastric hernia is usually repaired by open approach. In few cases surgeon may decide to repair it by laparoscopic (key-hole) approach. Both the approaches have advantages and disadvantages. You will be able to discuss with your surgeon at the time of consultation.

What happens during surgery?

Epigastric hernia repair is usually carried out under general anaesthesia. Incisions made will vary according to the type of surgery. Aim of the operation will be to identify the hernia defect and push it back in to the abdomen then a mesh or suture repair will be carried out to reinforce the abdominal wall. The wound is usually closed with absorbable sutures.

What is the after care?

You will be encouraged to be mobile as much as possible. We advise our patients to refrain from lifting heavy weights for four weeks and avoid driving till they are able to put an emergency stop. Our patients will be able to go home on the same day depending on the timing of the surgery.

Do I need to take time off from work following surgery?

It depends on the type of work involved, however generally you will need two weeks off from work.

What are the risks from surgery?

Minor side effects and complications common but serious side effects are very rare. There are risks of wound infection, bruising, bleeding from the wound rarely chronic pain and recurrence of hernia (2%)

We're here to help with any questions you have about any of the procedures we offer.
